Resume

About Me

7 years coding. With excellent debugging skills.
My focus technologies are JavaScript, Angular CLI, PHP, Rest APIs, MySQL, HTML5 and CSS.

Experience with custom developments from scratch and also with PHP or JavaScripts frameworks, Laravel or Angular, very good working front-end and backend even with database design and structuring.

Beyond the professional area, I have also gained a lot of experience from my personal projects. I have been trying a lot of crazy things and personal projects with large code lines and many hours of work.

What I have done

- Massive data management, large reports, real-time statistics and big data with data tables (using eg: ag-grid)
- Creation of customized complex and unique algorithms and formulas to solve unique needs.
- Development of complex systems, MVC architecture and object-oriented programming. (OOP)
- Database design and standardization (MySQL).
- Queries, Stored Procedures, triggers and functions in Mysql.
- Implementation of Braintree, Greenpay, PayPal and Stripe APIs (Payment gateways).
- External Login APIs, facebook SDK, Google.
- Consuming or developing APIs from scratch. Rest and SOAP types.
- Creation of front-end interfaces with HTML5, CSS, js or Angular CLI.
- Async data with PHP, ajax and others.
- Experience developing custom Wordpress plugins, Widgets and Themes.
- System maintenance and debugging. (PHP, JavaScript, MySQL).
- Dynamic Responsive websites and Web applications, using CSS, jQuery, Angular, Bootstrap and others.
- Websites and Web applications Optimization. (Improving the code, minifying, data compressing, etc).
- Scraping with JavaScript.
- Server management and ability to create a development environment for any lamp project.
- Understanding of web master concepts (SSL, IIS, DNS, Reverse proxys, and IP configuration, Cloudflare).
