Summary

7 years ago, I started programming in PHP 5.x, JavaScript vanilla, JQuery, HTML5, CSS3, and other technologies. Also, I learned to write queries, design, and modify MySQL databases.

After my first job, I jumped to 4 companies where I consolidated my knowledge of object-oriented programming and MVC pattern design. I also learned new technologies such as Angular CLI, TypeScript, and webmaster concepts like (Lamp and Wamp setup, SSL, IIS, DNS, Reverse proxies, IP configuration, Cloudflare).

I learned to develop modern APIs from scratch and to do integrations, so I have a good understanding of web services and SOA related standards like REST / OAuth / JSON.

In the PROFI marketing agency where I worked for more than 3 years, I was closely related to the clients and had a lot of experience working on projects in all stages of the software development life cycle from the development idea to the product delivery. I finished.

Something very important to mention is that I worked with WordPress for 3 years, developing totally personalized sites where I had to understand the WordPress loop, which is basically the core that is built in PHP.

During these 3 years, I was responsible for developing and modifying widgets, modules, plugins, menus, themes, among other components.

Experience

Web Developer

Jazz Gaming Solutions • San Jose, Costa Rica   01/2018 - 09/2020

Angular CLI application development. Versions 8 and 9.

mySQL data flow design for code and database processes.

HTML5 and CSS responsive design.

Relentlessly simplify and distill complex processes into intuitive and elegant UIs.

Development and design of systems with MVC architecture and data structures.

Building LEMP based server-side REST APIs.

Web Developer

PROFI • San Jose, Costa Rica   04/2014 - 02/2017

Custom website development in WordPress. (custom child themes, widgets, plugins, and modules)

Understanding and advanced handling of the WordPress loop core.

WordPress and Joomla MySQL Database modification.

Read and write MySQL queries, joins, triggers, and store procedures in pursuit of performance efficiency.

PHP 5.x and 6.x code maintenance and improvements.

Participating in Agile ceremonies, including sprint planning, stand-ups, retrospectives, and demos.

Web Developer

CIP Reporting • Virginia, United States   08/2016 - 06/2017

Working with a LAMP/WAMP/XAMP/MAMP stack environment.

Ingest all current reporting provisions and come up with smart ways to present them in a more end user-friendly manner.

Maintain productivity tools for management and employees, such as KPI Angular dashboards, and so forth.

Identify, bugs, techniques, and workflows to continuously improve processes.

Undertake deep-dive PageSpeed Google Insights analysis and provide recommendations.

Web Developer

Netsoft • San Jose, Costa Rica   03/2013 - 02/2014

Working with a LAMP / WAMP / XAMP / MAMP stack environment.

HTML5, CSS and Bootstrap responsive design.

Optimize components for maximum performance across a vast array of web-capable devices and browsers.

Collaborate with developers, designers, and customers to create tailored web solutions to their needs and requirements.

Provide operational support and maintenance for broadly distributed production systems.

Technologies

- PHP
- JavaScript
- AWS
- CSS
- HTML5
- Git Flow
- MySQL
- Angular
- TypeScript
- JQuery
- Composer
- Bootstrap
